

FACT SHEET

Temporay CCTV

OVERVIEW

Temporary CCTV solutions provide flexible and immediate surveillance capabilities for short-term security needs, such as events, construction sites, temporary facilities, or emergency situations. These systems offer rapid deployment, scalability, and mobility to monitor and protect temporary locations or assets effectively.

KEY FACTS

Quick Deployment: Temporary CCTV systems can be rapidly deployed and set up in a matter of hours, allowing for immediate surveillance coverage without the need for extensive infrastructure or installation.

Versatile Applications: Suitable for various environments, including outdoor events, construction sites, vacant properties, disaster relief areas, and temporary facilities.

Cost-Effective: Offers cost-effective security options for short-term needs, eliminating the expenses associated with permanent installations and long-term contracts.

STATISTICS

Properties with temporary CCTV solutions experience reduced rates of theft, vandalism, and unauthorised access during temporary events or construction projects compared to those without surveillance measures.

Temporary CCTV solutions enhance safety and security at large-scale events, public gatherings, and construction sites, minimising risks and liabilities for organisers and stakeholders.

BENEFITS

Deterrence: The presence of CCTV cameras acts as a visible deterrent to potential criminals, reducing the likelihood of theft, vandalism, and other security incidents at temporary locations or events.

Surveillance Coverage: Provides comprehensive surveillance coverage of temporary sites, monitoring critical areas, access points, and valuable assets in real-time.

Remote Monitoring: Many temporary CCTV systems offer remote monitoring capabilities, allowing security personnel to view live video feeds, receive alerts, and respond to security incidents from a centralised location or mobile device.

FEATURES

Wireless Connectivity: Often utilise wireless technology, such as cellular networks or Wi-Fi, for connectivity, enabling quick and flexible installation without the need for extensive cabling or infrastructure.

Mobile Cameras: Portable and weather-resistant CCTV cameras are used, allowing for easy relocation and repositioning to adapt to changing security needs or site conditions.

Temporary Power Options: Can be powered by various sources, including battery packs, solar panels, or temporary power generators, ensuring continuous operation even in remote or off-grid locations.

Motion Detection and Alerts: Equipped with motion detection sensors that trigger alerts and notifications, enabling proactive security measures and immediate response to suspicious activity.
